2.5.2019 in Žilina

Dear customers,

our priority is to continually strive to improve the provision of more flexible information, improve business relationships or comfort in business operations.

For this reason, since April 2019, we have implemented two-dimensional QR codes for carton and tube labels. By means of the above-mentioned identification we have ensured the automation and acceleration of the stocking process and unloading of goods by customers by means of electronic registration with scanners.

We have also introduced this because of the demands of more and more customers who are commonly using this method of storing products.

At the same time, we made an internal decision to change the way of identifying the finalization of bearings. We have replaced the numeric date used until now with a code whose identification is our internal matter. We assure you that with this step we did not internally lose tracking and product identification information.

For FIFO registration in the customer's warehouse, we recommend using the goods receipt date at your warehouse. Let us note that competitors use the same identification method, including premium brands in the bearing market.

We believe that these steps will bring a positive change and will not disturb your warehouse management system.

Best regards

Ing. Peter Zuzčák, PhD.  
Executive director
